PEDIATRIC OCCUPATIONAL
THERAPY

SENSORY DYSREGULATION

DOES THIS SOUND LIKE YOUR CHILD

- seek/avoid/crave sensory input throughout the day that interferes with their ability to participate
- they seem out of control, don't care about your reaction or their surroundings
- they are unable to describe what they are feeling or what is bothering them and they go from green to red in an instant
- meltdowns can last 20 minutes to 1hr and nothing seems to help
- they are impulsive and unsafe jumping off furniture or constantly moving
- seek control of others and their environment in order to feel in control of themselves

Occupational Therapy can help identify the **underlying cause** and provide evidence based intervention to help your child live their best life.
